TLP:WHITE

No restriction on distribution

OVERVIEW

KEYper Systems should not be assigned a Public IP Address or made publically accessible on the internet. We do not recommend this type of connection for our products due to the obvious security concerns from internet hackers, especially if you have personal or sensitive data on the systems or its network. Ultimately, it is your decision and there may be a particular reason for you to configure the system this way, but we want to ensure that you are aware of it and give you the opportunity to discuss more secure ways of achieving your operational objectives.

NEXT STEPS

If you wish to keep your system internet facing, you should refer to our system hardening guide linked in the references section below to harden your product. In any case we always recommend, however you use your system, that you keep your product up to date, use secure passwords and PINs appropriate to the application, and where applicable use firewalls and antivirus applications, especially if it is networked, as you would with any device containing a Windows PC.

CONTACT INFORMATION

If you have additional questions, please contact your KEYper representative.

If you suspect that a KEYper product has been the target of an attack, please contact KEYper Technical Support: <https://www.keypersystems.com/support/>
