

## 24-hour automated and secure key access

The KEYper® Service Express 24 (SE24) is a 24-hour automated key box dispensing system that works much like an ATM. It's the perfect solution for service departments and rental property management offices.

The system is fast and convenient to use, for you and for your customers. Your service advisor or manager simply places the keys inside the system, and your customer then uses a personal code to retrieve the keys at any time.

Automotive customers will appreciate the "no-hassle, no wait" convenience the system provides. The SE24 key box can also be used to pick up loaner vehicles, and is a great tool for "off site" or "mobile service operations" at business complexes.

Rental property management offices can utilize the Service Express key box to offer safe and secure key pickup after office hours. You protect not only the property owner, but provide peace-of-mind to the renter by demonstrating the seriousness with which you regard key security and accountability.

## How does it work?

Customers simply enter a five-digit PIN (supplied by you or your customer) and the KEYper SE24 key box dispenses the keys, displays directions to their vehicle, and they are on their way in less than ten seconds. Using the SE24 is that easy!

## Two model sizes

The KEYper® SE24 key box is available with as few as 20 key actuators (2420), and as many as 40 (2440), to accommodate any service facility and any budget. These two models share the same powerful software features.

## Convenient and secure access to keys at any time

### Service Advisor or Management Tracking

The key box software provides for a single “administrator” code with full access to software functions. In addition, you can have up to ten “service advisor” codes allowing limited access to software functions. The key box system will track customer PIN codes entered by each advisor, and will report PIN codes that have been incorrectly entered by the customer. A report detailing the last 200 transactions, along with overall usage statistics, is available based on quarterly, bi-annual, yearly, and life of the system.

### Transaction Reliability

The KEYper SE24 key box is designed to provide maximum reliability in all weather conditions. The system has been tested in simulated conditions of blowing rain, dust, vibration, humidity, and extended temperatures. In the event of a power loss, the system is smart enough to remember all advisor codes, PIN codes and message screens until power is restored.

### SERVICE EXPRESS SPECIFICATIONS

- Power Supply – 120/230V AC, 50/60 Hz, 1.3 A
- Power Consumption – 60W max
- Cabinet Material – 16-gauge Stainless Steel
- Door Material – 16-gauge Stainless Steel
- Operating Conditions – IP24 rated, Protection Degree 3  
Temperature range of -25 C (-13 F) to 40 C (104 F),  
humidity range of 20% to 90% relative, non-condensing
- Mounting – Wall
- Certifications and Agency Approvals – CE, FCC, UL and RoHS

### 2420 SPECIFICATIONS

- Dimensions – 14”H x 43”W x 11”D
- Weight – 70 lbs
- Key Positions – 20

### 2440 SPECIFICATIONS

- Dimensions – 28”H x 43”W x 11”D
- Weight – 130 lbs
- Key Positions – 40
